PROJECT SYNOPSIS

TITLE: Recipe Blog-Community

Team Members:

- Rohith G PES2UG19CS335
- Shabarinath K PES2UG19CS373
- Sai Sahana R K PES2UG19CS355
- Soumya PES2UG19CS400

Description:

A website that's going to be dedicated for a foodie community by connecting people who'd love to learn, and also help others in learning to prepare great delicacies at home. Built on the concept of blogging, community members can upload their recipes onto the website while anonymous users can view the uploaded recipes.

Functionalities:

1. The basic structure of the website using HTML,CSS and JS.
2. Front-end UI-designing using React.
3. Handling of requests and server management using NodeJs.
4. Providing a web-framework that makes it easier to use NodeJs, using ExpressJs.
5. Login to community handled using NodeJs and MongoDB Database management.
6. Expected features include menu->for manual search; search-bar->to search by tagname or name of recipe; provision of different slots for adding aspects of the recipe, hence easing the upload procedure; comments section->to let registered users express their views and experiences on tasting different recipes.
