ABSTRACT OF THE PROJECT

- This application is mainly created especially for those who are willing to serve others by means of taste, for those people who's passion includes cooking.
- It is a platform, where one shares his or her special secret recipe to the world.
- This application helps people share their magic recipe to others and allows people to read recipes of others, comment it, rate it, like or dislike it etc.
- From now, people can explore more things for free instead of limiting themselves to a small recipe book with limited items bought from the market.

MODULE DESCRIPTION

- The designed application contains the following functionalities:
 - Splash Screen Activity :- The home screen for the application includes register / signup and login buttons which redirects you to the respective pages.
 - Register Page Activity:- This page allows a new user to sign up to explore the world of recipes.
 - Login Page Activity:- Valid credentials if provided, successfully logs in to the account and takes the user to the home page.
 - Home Page Activity:- Here user can find the recipes posted and available by other users. For a new user, suggestions are brought up here. This page includes profile tab, search tab, add tab etc for further activities aside.

- Profile Page Activity:- By clicking the profile tab in the Home page, it gets redirected to profile page which include viewing and editing profile information given. It also displays your subscribed pages.
- Search Page Activity:- Allows the user to search for accounts and recipes by #tags or food names or account names of other users for subscriptions.
- Add Page Activity:- Allows the user to add his/her new recipe post by description along with photos and videos if necessary. The new post get added to the website by a click on submit button.
The user can delete the post in future if necessary.

THANK YOU!
